## REGULATORY INFORMATION SHEET

**Subject: Biocompatibility Testing on Chicopee Microfibre Plus Wipes**

- **7408, 100 gsm Blue**
- **7409, 100 gsm Red**
- **7410, 100 gsm Yellow**
- **7411, 100 gsm Green**

The **AVINTIV** products referenced above were submitted to Product Investigations Inc. for 'Evaluation of the Skin Irritating Propensities on Scarified Skin'. This is a modified dermal irritation test to assess the likelihood of dermal irritation from prolonged dermal contact. The test involves the application of saline moistened fabric patches to human skin (forearm) which has been scarified (lightly scratched). The test duration is 72 hours (3 days) after which the patched sites are compared against a control site using a modified Frosch & Klingman scoring scheme.

The conclusions from testing showed that the fabrics above 'possess a low Irritation Potential'.

Please note that it is the responsibility of the converter or packer of the finished article to verify that the article meets both the technical and regulatory requirements of the intended application(s).

Regards,
