

How to use S.U.D.S

Follow these 4 easy steps to prepare your S.U.D.S wipe dispenser

- **Step 1:** Release safety tab and remove the lid
- **Step 2:** Insert the dry roll of wipes
- **Step 3:** Slowly pour pre mixed chemical solution over the roll
- **Step 4:** Thread the wiper roll through the centre of the lid, and securely close the lid

Article No	Description	Sheet Size (L x W)	Sheets Per Roll	Rolls / Case*	Product Type	Saturation level**
84622	S.U.D.S. Microfibre 4F	23 x 17cm	200	6	Centrefeed Roll	1000ml
84624	S.U.D.S Applicator	23 x 17 cm	400	6	Centrefeed Roll	1000ml

* All S.U.D.S. cases come with x1 dispenser bucket

** Recommended saturation level per roll is designed as a guidance only, for longer dwell times saturate to a higher level

A brand of **Berry**

Chicopee® True Confidence™

S.U.D.S. is our bucket and wipe system designed to allow you to create an impregnated wipe to exactly fit your needs. Simply add your chosen chemistry to the dry roll to create a tailor made wet wipe for your cleaning needs

For general cleaning and tougher tasks

Maximum dwell time and chemical compatibility for sanitising or disinfecting

Chicopee S.U.D.S. allows you to create your own wet wipe dispensing system on site. The Chicopee Microfibre 4F fabric is designed especially for impregnation and cleaning. Combining the power of Microfibre cleaning while also releasing the maximum amount of cleaning chemical across the surface, and not locking it into the cloth makes this our most effective cleaning wipe.

The Microfibre 4F ensures a good dwell time to allow your cleaning chemical to work, and thanks to its Microfibre cleaning power it is also great at removing stains, grease or finger-marks.

Benefits of S.U.D.S. Microfibre 4F

- **Improved performance** - Disposable microfibre wipe ensures superior cleaning performance vs traditional wet wipes
- **Increased flexibility** - Create different impregnated wipes for various areas
- **Improved dwell time** - Encourages better cleaning behaviour vs spray and wipe systems (chemicals are often wiped off the surface with paper towels too soon)

The S.U.D.S. Applicator wipe is specifically designed for disinfection and sanitising of clean surfaces, whereas the S.U.D.S. Microfibre 4F is an all in one cleaning wipe. S.U.D.S. applicator is therefore the perfect tool for releasing as much liquid as possible onto the surface to ensure maximum dwell time and efficiency at killing bacteria and viruses.

Produced from synthetic fibers it reduces any interaction between the cleaning chemical and the wipe to ensure great efficacy and performance from your chosen chemical.

Benefits of S.U.D.S. Applicator Wipe

- **Lowest cost SUDS solution** - Much more cost effective than wet wipes
- **Excellent liquid release** - To increase dwell times and reduce chemical waste
- **Synthetic substrate** - For increased chemical compatibility and stable chemical efficacy
